Based on Article: "Ultimate Resource for Expert Cannabis Growing Support and Cultivation Advice"
Website: <https://theseedconnect.com>

A practical checklist to guide you through the cannabis growing process, ensuring you cover all essential steps from seed selection to harvesting.

Checklist Items:

1. Choose the Right Seeds

Evaluate your cultivation goals (yield, speed, genetics) and select the appropriate seed type (Feminized, Autoflowering, Regular, F1 Hybrids, or Landrace).

Reference Section: Choosing the Right Seeds

2. Prepare Germination Method

Select a germination method (Paper Towel, Direct Soil, Starter Plugs, etc.) based on your needs. Ensure you have the required materials ready.

Reference Section: Germination and Early Vegetative Care

3. Soak Seeds

Soak the seeds in clean water for 12–24 hours to initiate the germination process properly.

Reference Section: Germination and Early Vegetative Care

4. Germination Setup

Place the soaked seeds between damp paper towels on a plate and maintain a warm temperature (22–26°C) in a dark environment.

Reference Section: Germination and Early Vegetative Care

5. Transplant Seedlings

Once the taproot appears (1–7 days), carefully transfer the seedlings to a suitable growing medium, burying them slightly (2–3 mm).

Reference Section: Germination and Early Vegetative Care

6. Set Environmental Conditions

Maintain relative humidity (70–85% during germination) and transition to 50–65% RH for early vegetative growth to promote strong root systems.

Reference Section: Germination and Early Vegetative Care

7. Manage Light Exposure

Introduce low-intensity light after 48–72 hours post-transplant, ensuring to simulate a gentle environment for your seedlings.

Reference Section: Germination and Early Vegetative Care

8. Monitor Seedling Health

Keep an eye on seedlings for signs of damping-off or legginess. Adjust watering, airflow, and lighting as necessary to prevent issues.

Reference Section: Germination and Early Vegetative Care

9. Transition to Vegetative Care

Gradually introduce your plants to higher light intensity and begin caring for nutrients and watering strategies as they grow.

Reference Section: Germination and Early Vegetative Care

10. Plan for Pests and Diseases

Prepare for pest management and disease prevention strategies, ensuring your environment is clean and conditions optimal.
